Corrosion FREE Formula 8000 Industrial Rust Preventative

Description: Formula 8000 Industrial is a formulated corrosion/rust inhibiting and lubricating treatment for ferrous and non-ferrous metals and specifically for corrosion protection in industrial environments where acid fume, salt spray and high humidity result in flash corrosion of metal parts in manufacturing and transport of finished parts.

Qualities: Formula 8000 Industrial is an outstanding blend of **non-toxic** rust inhibitors and neutralizing agents in a severely hydrotreated and hydrocracked base oil (petroleum). **It is voc free.** Formula 8000 Industrial will dry to a slight oily tack.

Formula 8000 Industrial can be applied by dipping, spraying or brushing.

Applications: Formula 8000 Industrial is used for rust and corrosion protection on ferrous and non-ferrous metals. Used extensively on iron castings and finished parts for short to long term protected storage.

Formula 8000 Industrial will displace water and aqueous cutting fluids, leaving a protective film.

TYPICAL PROPERTIES

FORMULA 8000 INDUSTRIAL

Flash Point (open cup)	205°C
Specific Gravity	.860
Viscosity @ 40°C	69.2 cSt
Vapor Pressure less than .001 KPW	
Solvent content / VOC's	0%
Rust Protection humidity cabinet	120 days*

*Removed from test, no failure.
